Flagpoles Installed

House of Flags' specialist installation team installed 5 new flagpoles at the Copthorne Hotel. The installation job was very complicated, installing the flagpoles into planters outside the front of the hotel.

To begin with the team had to remove old plants and bushes from the planters and then remove all of the soil. The team then had to fill the planters with concrete, ensuring there was enough to safely secure the new flagpoles in place.

When it came to installing the hinged baseplates and flagpoles, our professional installers had to ensure all of the flagpoles were level. This was made more complicated as the planters themselves are not level, instead being displayed on a gradient.

In total this specialist install job took a total of four days, using two of our install engineers.
